RESEARCH INTEREST

My research focuses on modeling *closed-loop vibration sensing systems* that can adaptively perceive the environment through passive observation, and then through active excitation informed by what the system has already learned. I work at the intersection of physics-based modeling and data-driven machine learning, designing sensing frameworks where excitation, measurement, and analysis continuously refine one another. A central part of my approach is iterative validation between lab prototyping and real-world deployment. This cycle enables robust, scalable systems that transform everyday structures into reliable sensing platforms.

EDUCATION

Present	Ph.D. in Electrical and Computer Engineering , University of Michigan, Ann Arbor Major GPA: 3.9/4.0 Advisor: Prof. Pei Zhang & Prof. Junyi Zhu
Dec 2022	M.S. in Electrical and Computer Engineering , University of Michigan, Ann Arbor Major GPA: 3.9/4.0 Advisor: Prof. Alanson Sample
July 2020	B.E. in Electronic Information Engineering , ShanghaiTech University, Shanghai Major GPA: 3.9/4.0
